

2009 BC Hydro Power Smart Excellence Awards

The Royal BC Museum Corporation is pleased to announce that we have been selected as a finalist for a 2009 Power Smart Excellence Award in the category of Workplace Conservation Leadership Award.

The Power Smart Excellence Awards recognize energy efficiency and conservation leadership from BC-based businesses and organizations that span the commercial, government, industrial, institutional, and retail sectors. The Power Smart Excellence Awards strive to inspire and enable other organizations to participate and implement their own programs that lead to a reduction in energy use.

We are incorporating sound energy management into our operations, not just as a one-time project, but as an integrated approach to continuous improvement in energy performance. Together with our recycling program and other sustainability initiatives (like, water conservation), we are making energy efficiency and conservation a way of doing business.

Finalists were chosen after a judging panel reviewed nominations submitted by both BC businesses and BC Hydro employees. The Royal BC Museum is honoured to have been recognized among BC's energy efficiency leaders, as a finalist for a Power Smart Excellence Award.

"Each year we see a deeper level of enthusiasm among organizations that are nominated, making the decisions for our judging panel even more challenging," said Lisa Coltart, Executive Director of Power Smart and Customer Care for BC Hydro. "I congratulate every Power Smart Excellence Award finalist for their commitment to energy conservation and for playing a role in helping our province become electricity self sufficient."

Award winners will be announced at the seventh annual BC Hydro Power Smart Excellence Awards ceremony on May 26, 2009 at the Hyatt Regency Hotel in Vancouver.
